C1

~~Claim 1 (twice amended). A light occlusive eye patch having an upper side and a lower side, comprising at least two layers of foamed material, said at least two layers being a top layer and an inner layer; one side of said inner layer facing said top layer, and the other side of said inner layer being provided with a skin-compatible self-adhesive coating.~~

Claim 2. Please cancel

C2

Claim 3 (twice amended). The light occlusive eye patch of Claim 1, wherein a black contour is printed on said top layer.

Claim 4 (twice amended). The light occlusive eye patch of Claim 1, further comprising a black-colored interlayer of a foamed material between said top layer and said inner layer.

Claim 5 (twice amended). The light occlusive eye patch of Claim 1, wherein said foamed materials are selected from the group consisting of polyurethane,

polypropylene, polyethylene, and polyvinylchloride foams.

C²
cont. Claim 6 (twice amended). The light occlusive eye patch of Claim 5, wherein said polyurethane is a polyesterurethane.

Claim 10 (twice amended). The light occlusive eye patch of Claim 1, wherein:

- C³
- a) a layer of unfoamed polyurethane is applied to the top layer, or
 - b) a two-dimensional textile structure, selected from the group consisting of nonwovens, knits and wovens is embedded in the top layer.
-

Claim 13 (twice amended). Process for producing the light occlusive eye patch of Claim 1 comprising the following process steps:

- C⁴
- a) preparing the top layer, the inner layer and, optionally, an interlayer in each case by introducing a mixture of aqueous aliphatic dispersions of polyesterurethanes,
 - b) adding a foaming agent and a dye to the respective mixture,
 - c) foaming the respective mixture to the desired degree of foaming by
